

Leaders in health information management, data quality and integration services

Delivering high quality data and correct records needed by key stakeholders to provide care and manage patients.

Velocity Health Informatics **delivers services engagements at the intersection of data quality, integration and patient identity.** Utilizing Velocity's Domain Driven Design and microservices our proven services provide our clients with the data and records required to deliver high quality care.

- RECORD REMEDIATION
- HIM GOVERNANCE
- INTEGRATION AND DATA QUALITY

Current initiatives – population health, value based contracting and analytics based treatments – continue to escalate demands for high quality data and accurate patient identification. Providers and payers need to care for and manage patients across multiple care settings. **This requires access to data from multiple systems, normalizing that data and presenting it in a patient centric format.** Existing systems suffer from several issues impeding required access, quality and usability.

- Poor record matching solutions creating large volumes of duplicate records
- Dissatisfied users who have challenges accessing and using data
- Monolithic with data locked away and not realizing value
- High cost MDM solutions which require lengthy implementations
- Low end point solutions can't scale or adapt to multiple environments.

Services

DATA INTEGRATION

Velocity normalizes your data to prepare it for use by analytics and applications.

RECORD REMEDIATION

Credentialed staff and machine learning automation tools fix duplicate records, patient identity issues and ensure accurate records.

DATA QUALITY

Velocity's Quality Explorer Dashboard (Q.E.D.) analyzes the accuracy of data received from applications and systems to improve data quality.

Benefits

Velocity's services deliver higher quality data and more accurate records for clients to deliver better care and attain numerous benefits.

- More efficient registration and medical record workflows
- Improved collaboration between healthcare providers results in better and faster diagnosis and treatment with broader access to data from across the domain driven data design
- Reduced repetitive and unnecessary testing with more timely data and records
- More efficient use of time since providers have greater confidence in the quality and accuracy of data and records
- Reduced errors in billing leading to improved revenue cycle management

Why Velocity?

Velocity Health is committed to improving the overall quality of care. Velocity has delivered high value engagements to healthcare providers, payers, ACOs and HIEs.

Velocity's mission is to **improve data and record access and quality through engagements which deliver high quality data, accurate records, scalable designs, HIM governance and interoperability.** Our clients' data and records utilize the Velocity Health Domain Driven Design, a secure, scalable framework that meets the unique needs of the healthcare industry for interoperability, security, availability, productivity and flexibility.
